EXP NO 3: To study the Packet tracer tool Installation and user Interface

AIM:

Study Cisco Packet Tracer installation and user interface and design a simple network and observe the behaviours the of a Hub and a Switch

INTRODUCTION:

Cisco Packet Tracer is a network simulation tool used to design, configure and test networks without physical devices. It is available for windows and Linux

Installation

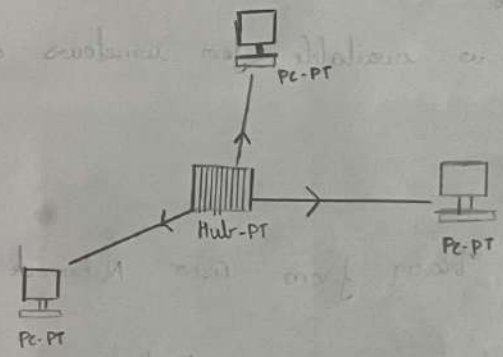

1. Download Packet Tracer from Cisco Network Academy
2. Install using the setup file or installer
3. Launch the application

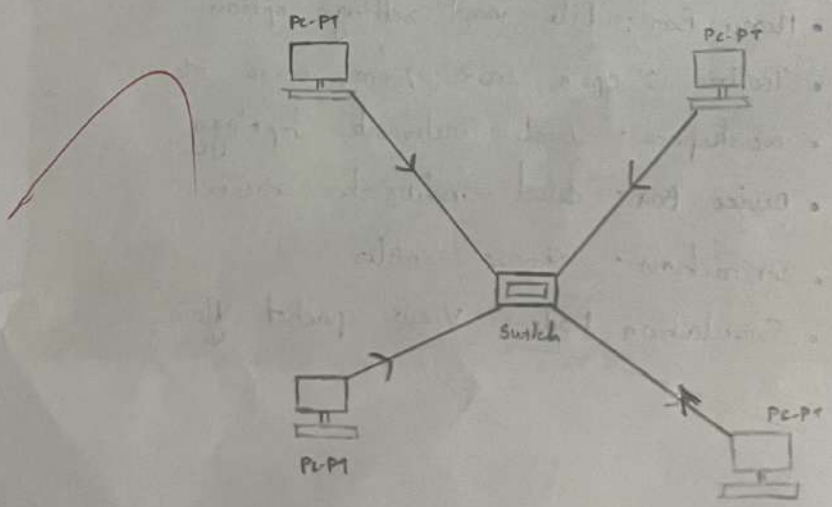

User Interface

- Menu Bar: File and settings option
- Toolbar: open, save, Zoom, undo, etc
- workspace: Create network topology
- Device Box: Select network device
- Connection: Choose cables
- Simulation Mode: View packet flow

Procedure

1. Place 4 PCs and 1 Hub, then 4 PC's and 1 switch
2. Connect all PC's using Copper straight - through cables
3. Assign IP addresses to all PC's
4. use Add simple PDU to send packets between P
5. Observe packet flow in Simulation Mode
6. Compare the behaviour of the Hub and switch

OBSERVATION

Hub: Broadcasts data to all connected devices

Switch: sends data only to the destination device.

RESULT:

Successfully created and tested the network in Cisco Packet Tracer. The Hub broadcasts data to all devices, while the Switch forwards data only to the destination devices.
