Ex NO: 4

SETUP AND CONFIGURE LAN

AIM:

Setup and configure a LAN (Local area Network) using a switch and Ethernet cables in your lab

HOW TO SETUP A LAN

STEP 1: Plan and Design and appropriate network topology taking into account network requirement and equipment location

STEP 2: You can take 4 computer, 1 switch with 8, 11 and 24 port which is sufficient for network of these size & 4 ethernet cables.

STEP 3: Connect your computer through network cables which is simple a plugging one end of the Ethernet cable into your computer and the other end onto your network switch.

STEP 4: Configure the IP address of the computer

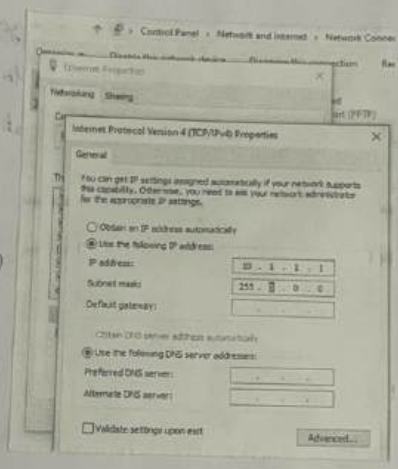

- PC - 10.1.1.1
- PC2 - 10.1.1.2
- PC3 - 10.1.1.3
- PC3 - 10.1.1.4
- Subnet mask - 255.0.0.0

STEP 5: Configure the switch with IP address 10.1.1.5 and subnet mask 255.0.0.0

STEP 6 : check connection using the ping command

STEP 7 : share connectivity with other computers on the LAN

STEP 8 : Access the shared folder with other computers on the LAN.

RESULT:

A LAN (local area network) using a switch and ethernet cable has been setup and configured.
